

NK

NILOY KANTI PAUL

Salesforce Professional Profile

Engineer · Architect · Integrator

Full-lifecycle Salesforce delivery across Sales, Service, Experience, Health & Financial Services Cloud — extended with full-stack engineering when the platform needs help.

- 01 Full lifecycle delivery — architecture to production
- 02 Case studies across 9 industries, 1,800+ factories
- 03 Full-stack capability, four peer-reviewed publications

- Apex · LWC · Flow · Experience Cloud
- Integrations · Automation · Full-Stack
- Dhaka, Bangladesh · Open Worldwide

01

SECTION 01

Digital Expertise, Salesforce First

I'm a Salesforce engineer based in Dhaka, Bangladesh, currently working as a Software Engineer at Intellier Limited. My core focus is building and extending Salesforce solutions — Apex, Lightning Web Components, and Flow automation — across five core clouds: Sales, Service, Experience, Health, and Financial Services. I extend those solutions with full-stack development (Java, Node.js, React, C#, Python, PHP) when a project needs custom back-end services, external APIs, or integrations beyond what the platform covers natively.

Before Intellier, I spent close to two years at TwinForce Solutions Limited, progressing from Intern to Senior Software Developer while delivering Salesforce CRM automation for international clients across travel, finance, healthcare, nonprofit, agriculture, education, and public-safety sectors. Alongside client delivery, I maintain a research practice in applied AI/ML and IoT, with four peer-reviewed publications.

"I hold an MSc and a Gold Medal-honored BSc in Computer Science from AIUB — and I still read the Salesforce release notes."

CURRENT ROLE

Software Engineer @ Intellier Limited

FOCUS

Salesforce · CRM · Full-Stack Integration

RESEARCH INTERESTS

AI, Machine Learning, IoT

CAREER PROGRESSION

02

● SECTION 02

Salesforce Technical Expertise

What I actually build, mapped to the phases of a Salesforce implementation — from data model to production integration.

DEVELOPMENT
Apex · Lightning Web Components · SOQL / SOSL

AUTOMATION
Flow · Apex Triggers · Approval & Process Automation

EXPERIENCE & PORTALS
Experience Cloud · Customer Portals · Partner Portals · Community Portals

ARCHITECTURE & SECURITY
Data Modeling · Salesforce Shield · Security & Sharing Model

INTEGRATION
REST / SOAP APIs · MuleSoft · Stripe · DocuSign · QuickBooks

CLOUDS DELIVERED
Sales · Service · Experience · Health · Financial Services · NPSP

DATA & DOCUMENTS
Data Migration · PDF Butler · Salesforce Files

ANALYTICS
Tableau Integration · Reported Business Metrics

GOOD FIT IF YOU NEED
A single engineer who can own a Salesforce implementation end-to-end — data model, automation, security, and integration — and extend it with full-stack work when the platform needs help.

03

SECTION 03

Technology Should Feel Dependable

"Salesforce work and full-stack engineering were never separate disciplines to me — both are about turning a business problem into a system that quietly does its job, correctly, every day."

- 01

Discover & Align
Talk to stakeholders and end-users to identify the real pain points before proposing a solution.
- 02

Design the Solution
Requirements become a concrete data model, automation strategy, and roadmap prioritized by business impact.
- 03

Configure First
Standard Salesforce functionality first — configuration, Flow, and native features before custom code.
- 04

Build Where Needed
Apex, LWC, and integrations only where configuration genuinely can't meet the requirement.
- 05

Validate
Testing and UAT against actual business scenarios, not just happy-path demos.
- 06

Deploy & Support
Careful release management, documentation, and post-launch support — so production is a transition, not a surprise.

PRECISION & INTEGRITY

Clean, tested code and honest scoping — if a timeline or approach won't work, I say so early, not after the deadline.

CONTINUOUS LEARNING

An MSc, published research, and staying current with every Salesforce release — learning isn't optional in this field.

CLIENT-CENTERED DELIVERY

Clear communication, iterative check-ins, and documentation that outlives the project — handoffs are never a scramble.

RESPONSE TIME
Within 24–48 hours

TIME ZONE
GMT+6 · Dhaka

04

● SECTION 04

Where I Add Value

PRIMARY SERVICE

Salesforce Engineering

Apex development, Lightning Web Components, Flow automation, and CRM configuration across Sales, Service, Experience, Health, and Financial Services Clouds — plus data migration and process automation.

APEX

LWC

FLOW

EXPERIENCE CLOUD

HEALTH CLOUD

FINANCIAL SERVICES CLOUD

DIFFERENTIATOR

Salesforce + External Systems

REST/SOAP APIs, custom backend services, databases, and third-party integrations — connecting Salesforce to the systems it doesn't natively cover.

REST APIS

MULESOFT

STRIPE

DOCUSIGN

QUICKBOOKS

TABLEAU

SUPPORTING SERVICE

Technical Consulting

Architecture review, requirements discovery, solution design, and documentation to keep technology decisions aligned with business goals.

ARCHITECTURE

DISCOVERY

DOCUMENTATION

HEALTH CHECKS

ADDITIONAL ENGINEERING BACKGROUND

Full-stack development in Java, Node.js, React, C#, Python, and PHP, plus an active research practice in applied AI/ML, computer vision, and IoT.

● SECTION 05-06

Six Case Studies. **Six Industries.** One Consistent Process.

What follows are Salesforce implementations delivered for international clients — the problem each org faced, what was built, my specific contribution, and the reported outcome. Client identities are withheld per confidentiality; dashboard views shown are illustrative mockups of the kind of console each build produced, not live client data.

05

PUBLIC SAFETY · 1,800+ FACTORIES

Salesforce Inspection & Compliance Platform

CHALLENGE

A workplace-safety organization overseeing 1,800+ garment factories in Bangladesh needed to run structural, electrical, fire, and boiler inspections without reliable factory-floor internet — while keeping every stakeholder informed.

SOLUTION

Built offline-capable Lightning Web Components with automatic sync on reconnect, a Service Cloud case-management backbone for inspections and remediation, factory/inspector portals on Experience Cloud, and PDF Butler for automated compliance documentation.

Illustrative console mockup — representative of the inspection dashboard built, not live client data.

KEY FEATURES

- Offline-first data capture
- Inspector & factory portals
- Case-managed remediation tracking
- Automatic sync on reconnect
- Automated PDF compliance reports
- Role-based access & audit trail

MY CONTRIBUTION

Offline LWC architecture · Service Cloud configuration · Apex automation · Experience Cloud portals · PDF Butler and Stripe integration · security configuration · deployment.

Outcome figures are client/organization-reported metrics. Client identity withheld per confidentiality; measurement methodology available on request.

TRAVEL · EXPERIENCE CLOUD

Travel Booking & Partner Portal

06

CHALLENGE

A premium travel company running small-group cultural trips relied on disconnected manual processes for bookings, payments, and logistics — causing errors, delayed confirmations, and data-security gaps.

SOLUTION

Built a customer and partner portal on Experience Cloud with LWC, layered Sales Cloud and Service Cloud for the sales and support lifecycle, automated confirmations with Apex and Flow, and secured payment data with Salesforce Shield across a Stripe/Braintree integration.

Illustrative console mockup — representative of the booking dashboard built, not live client data.

KEY FEATURES

- › Self-service partner portal
- › Automated booking confirmations
- › Stripe / Braintree payment security
- › Unified sales & support case view

MY ROLE

Lead Salesforce developer — architecture, Experience Cloud build, Apex/Flow automation, security configuration, and REST integrations.

Outcome figures are client/organization-reported metrics; client identities and measurement details withheld per confidentiality.

06

FINANCE · FINANCIAL SERVICES CLOUD

Mortgage Loan Origination Platform

CHALLENGE

A mortgage financing company's manual loan workflows created long processing times, no mobile access for applicants, and compliance risk around sensitive financial data.

SOLUTION

Implemented Financial Services Cloud for the full loan lifecycle, an Experience Cloud portal for mobile-friendly applications, DocuSign for e-signatures, Stripe for payments, and Salesforce Shield with real-time credit-bureau API integration for compliance.

Illustrative console mockup — representative of the loan-pipeline dashboard built, not live client data.

KEY FEATURES

- Mobile-friendly loan application
- DocuSign e-signature workflow
- Real-time credit-bureau integration
- Shield-secured financial data

MY ROLE

Lead Salesforce developer — Financial Services Cloud configuration, loan-automation Apex, DocuSign/Stripe integration, Shield security setup.

Outcome figures are client/organization-reported metrics; client identities and measurement details withheld per confidentiality.

HEALTHCARE · HEALTH CLOUD

Patient Booking & HIPAA-Aligned Care Platform

06

CHALLENGE

A regenerative-medicine practice ran appointment scheduling manually, had no online booking, and lacked the security controls required to handle patient health information safely.

SOLUTION

Deployed Health Cloud for clinical management, an Experience Cloud patient portal with online scheduling, automated appointment and follow-up Flows, and Salesforce Shield configured for HIPAA-aligned encryption and audit trails.

Illustrative console mockup — representative of the scheduling dashboard built, not live client data.

KEY FEATURES

- Online patient self-scheduling
- Automated follow-up reminders
- Shield encryption & audit trails
- Care-coordination case view

MY ROLE

Lead Salesforce developer — Health Cloud setup, patient portal, care-coordination automation, HIPAA-aligned security configuration.

"HIPAA-aligned" describes Shield-based encryption and audit-trail configuration, not a formal compliance certification. Outcome figures are client-reported; identities withheld per confidentiality.

06

NONPROFIT · NPSP

Racial-Equity Grant Management Platform

CHALLENGE

A national advocacy organization managed complex grantmaking and research programs with no secure system for applications, fund tracking, or sensitive research data.

SOLUTION

Customized NPSP for the full grant lifecycle, built a community portal on Experience Cloud with research libraries and application forms, automated review routing with Flow, and integrated PDF Butler for grant documents — secured with Salesforce Shield.

Illustrative console mockup — representative of the grant-review dashboard built, not live client data.

KEY FEATURES

- Online grant application forms
- Automated review routing
- Community research library
- Shield-secured sensitive data

MY ROLE

Lead Salesforce developer — NPSP customization, Experience Cloud portal, grant-workflow automation, Shield security, PDF Butler integration.

Outcome figures are client-reported metrics; client identity withheld per confidentiality.

AGRICULTURE · SALES CLOUD + TABLEAU

Commodity Trading & Market Intelligence Platform

06

CHALLENGE

An agricultural marketing firm connecting producers and buyers relied on manual deal tracking with no centralized view of pricing trends or transaction history.

SOLUTION

Built an Experience Cloud trading portal for producers and buyers, configured Sales Cloud for deal management, integrated Tableau for market analytics, and automated contracts via DocuSign with SMS notifications for time-sensitive trades.

Illustrative console mockup — representative of the trading dashboard built, not live client data.

MY ROLE

Lead Salesforce developer — trading portal, Sales Cloud deal management, Tableau integration, DocuSign and SMS-server connectivity.

TECHNOLOGY → BUSINESS OUTCOME

SALESFORCE TECHNOLOGY	WHAT I USE IT FOR
LWC	Custom portals & complex user experience beyond standard pages
Apex	Complex business logic, transaction control, and integrations
Flow	Business process automation without custom code
Salesforce Shield	Encryption, audit trails, and compliance-aligned security

Outcome figures are client-reported metrics; client identity withheld per confidentiality.

07

● SECTION 07

Industries I've Delivered In

Nine sectors, one consistent approach: understand the domain first, then let the platform's structure — not a generic template — drive the build.

INDUSTRY	SALESFORCE STACK	REPORTED OUTCOME
Travel	Experience + Sales + Service Cloud	30% higher booking conversion
Finance	Financial Services Cloud	50% faster loan approval
Public Safety	Service Cloud, offline LWC	35% higher inspection completion
Healthcare	Health Cloud, Shield (HIPAA-aligned)	25% more patient bookings
Nonprofit — Grants	NPSP	40% faster grant processing
Nonprofit — Statewide	NPSP + Experience Cloud	25% higher engagement
Agriculture	Sales Cloud + Tableau	30% faster transactions
Education	Education Cloud	20% higher event attendance
Humanitarian	NPSP, aid coordination	40% faster emergency response

ON CLOUD COUNTING

"5 core Salesforce clouds" refers to Sales, Service, Experience, Health, and Financial Services Cloud — the primary licensed clouds delivered on. NPSP and Education Cloud are additional Salesforce products delivered on top of that core, shown separately above for accuracy.

● REPORTED OUTCOME BY INDUSTRY, RANKED

SECTION 08

Full-Stack Engineering & Independent Builds

08

Supporting engineering capability for Salesforce and connected systems — independent projects that keep my full-stack skills sharp and occasionally feed back into client work.

FLAGSHIP · THREE GENERATIONS

RAW — Remote Assistant Workers

A freelancing platform rebuilt across three successive versions — a Java console app, then Java Swing with MySQL, then C#.NET with SQL Server — each generation adding real-time matching, feedback, and reporting for buyers and sellers.

- JAVA
- C#
- .NET
- SQL SERVER
- MYSQL

RESEARCH COMPANION

TOSS — Traffic Operation Surveillance System

A traffic-violation surveillance system with ML-based detection, built on Node.js, NestJS, and Next.js — the engineering counterpart to my published traffic-safety research.

- NODE.JS
- NESTJS
- NEXT.JS
- MACHINE LEARNING

Also: **IDEA-X** (ASP.NET social platform for engineers to share ideas) and **Medic Master** (PHP-based healthcare marketplace connecting patients with providers). On GitHub: Together Go (Java classroom platform) · Fest Of Harmony (C++/OpenGL interactive graphics).

REPOSITORY

github.com/DEV-NKP

INDEPENDENT PROJECTS BY CORE LANGUAGE

Java	2 projects
C# / .NET	2 projects
Node.js	1 projects
PHP	1 projects
C++	1 projects

● SECTION 09

Research, Publications & Education

Peer-reviewed research in applied AI/ML and IoT. Lead or co-author on all four publications.

Intelligent Traffic Surveillance: Machine Learning-Based Detection of Vehicle Speed Violations

IJACSA, Vol. 17, Issue 5 · 2026

Detection of Traffic Rule Violations Using Machine Learning: An Analytical Review

MJSAT, Vol. 3, No. 1 · March 2023

Smart Trash Collection System – An IoT and Microcontroller-Based Scheme

Journal of Engineering Research & Reports, Vol. 24, Issue 11 · 2023

Meta Bin – An Arduino-Based Smart Device for Collecting Trash

ICEI Conference Proceedings · 2022

CURRENT RESEARCH — HEARTNET & CARDIACNET-V2

Multitask echocardiogram video analysis and cardiac-disease classification, combining 3D CNNs, Swin Transformer, EfficientNet, and LSTM architectures alongside MIL-based image clustering. Research profile: researchgate.net/profile/Niloy-Paul-2

● EDUCATION

MSc, Computer Science	AIUB · 2024–2025
BSc, Computer Science & Engineering	AIUB · 2020–2023
Gold Medal, Summa Cum Laude	BSc Honors

● PROFESSIONAL DEVELOPMENT

Cisco CyberOps Associate
CertiProf Cyber Security Foundation
IAENG Membership
Coursera — OOP with Java
Coursera — C++ for C Programmers

Ready to build something that just works.

Need a Salesforce solution that goes beyond standard configuration? I help organizations design, build, integrate and maintain solutions across CRM, portals, automation and external systems.
